Children's Well-Being and Violence against Children: Psychosocial and Public Health Aspects

Message from the Guest Editor

Violence against children and child well-being have become subject matters of great concern for various disciplines. Topics related to psychosocial and health predictors and outcomes of violence against children and adolescents (child abuse and neglect, bullying in the context of school and cyberspace, dating and sexual violence, sibling and peer violence, discrimination, hate crimes, and victimization by school teachers and staff) and/or correlates of the objective or subjective well-being of children and adolescents (life satisfaction, poverty and material condition, health behavior and behavioral well-being, and academic outcomes and development) are welcome. Topics of the examination of the potential mediating and moderating mechanism in the relationships between violence against children, child well-being and their correlates are also welcome. The submissions that focus on the potential interconnectedness of these two topics and the presentation of interdisciplinary works and multinational collaborative research are especially encouraged. Empirical studies, intervention studies, as well as high-quality systematic reviews and meta-analytic studies will be considered.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
