Chronic Kidney Disease: The Global Challenge

Message from the Guest Editors

The coexistence of other risk factors of chronic kidney disease such as hypertension and adiposity contributes to the higher cardiovascular morbidity and mortality rates observed in these patients. Beyond the classical cardiovascular risk factors, other factors inherent to kidney disease itself such as alterations in bone mineral metabolism, anemia or electrolyte disorders have been the target of intensive research in recent years. Of note, the inherent link between heart and kidney disease is a matter of intense and fertile debate.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
