

Special Issue

Cumulative Impacts for Permits and Real-World Decision-Making

Message from the Guest Editors

The purpose of this Special Issue is to support research and development on incorporating cumulative impacts into real-world decision-making, especially, but not exclusively, with respect to permits. Cumulative impacts represent a broad range of stressors and benefits. Real-world decisions such as permits help to set boundaries for what should be considered and how they should be weighted within the decision-making process. While baseline conditions in the community affect resiliency, this Special Issue is not seeking broad cumulative impact scoring techniques or non-targeted analyses; rather, the focus is on how cumulative impacts affect decision-making, so priority will be given to papers with that focus. Keywords

- cumulative impacts
- health impact assessment
- permitting
- decision-making
- community resiliency
- environmental justice

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
