

Special Issue

Cyber Health Psychology and Psychotherapy: The Use of New Technologies in the Service of Mental Health

Message from the Guest Editors

In this Special Issue, some of the technologies used in the clinical-psychological, psychotherapy, and mental health field will be analysed, including virtual reality, biosensors, artificial intelligence, and affective computing, with the aim of understanding how technological progress and the emergence of new technologies can generate value within the psychological panorama. Research suggests that the integrated use of psychological techniques and new technologies is extremely productive in terms of the potential improvement of health and therefore of “psychological health empowerment”. Given the great potential of the instruments analyzed that still continue to evolve and be refined, it is advisable to know them, validate their effectiveness, and adapt our operational models to new mental realities.

Guest Editors

Prof. Dr. Pasquale Caponnetto

Prof. Dr. Maria Salvina Signorelli

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
