

Special Issue

Digital Health and Point of Care: Contributions to the ‘New Normal’ of Healthcare Provision

Message from the Guest Editors

As 2020, the WHO-declared Year and of the Nurse and Midwife, concludes, this Special Issue will focus on digital health and the progress of the connection of points of care by all stakeholders within healthcare administration, clinical, education or research environments. Studies that explore the nexus of nursing, other disciplines, health professions, and consumers to promote person-centered care, health and wellbeing are encouraged. Celebration of innovations, solutions, and services that enhance the role and function of healthcare professionals within the multidisciplinary digital team can be showcased. Improvements to models of care and new ways of working or harnessing digital technology to overcome healthcare or service delivery challenges are also welcome. While the Year of the Nurse and Midwife took an unexpected path to meet the demand of the COVID-19 pandemic, there are still lessons learned and achievements to be shared. This Special Issue seeks original articles that inform or can influence how digital health provision at the point of care can be enhanced to deliver high-quality and safe care and lead health professionals into the next decade.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
