

Special Issue

Determinants of Health and Well-Being in at Risk Populations

Message from the Guest Editor

This Special Issue aims to increase our knowledge of the protective and risk factors of certain behaviors that entail a significant deterioration of health, well-being, and quality of life in several populations. Deepening the study of the modification of unhealthy behavior patterns would provide important knowledge and information of unquestionable value for clinical practice and research, fundamentally for the development and application of intervention programs for health promotion and quality of life improvement. This would be especially important in at-risk populations that develop lifestyles that lead to health deterioration. Moreover, these contributions will be of great relevance for the implementation of new public health policies, which would reduce health costs by preventing risk behaviors and promoting healthy lifestyles.

Guest Editor

Dr. Natalia Alabaldejo Blázquez

Department of Health Psychology, Faculty of Health Science, University of Alicante

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
