

## Special Issue

# Digital Technology in Implant Dentistry

### Message from the Guest Editors

Dear colleagues,

Dental implants are a reliable treatment option for replacing missing teeth in both partially and completely edentulous patients. The introduction of new dental materials and digital technologies is modifying the oral implantology practice by increasing the accuracy, precision, and predictability; saving chair time; reducing waste; and consequently, saving time and improving the patient-reported outcome measures (PROMs). This Special Issue aims to contribute to the unrelenting and rapid evolution of digital workflows in implant dentistry.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
