

Special Issue

Applied Fundamentals of Health Economics

Message from the Guest Editor

This is especially pertinent given the magnitude of economic distortions that several countries are experiencing due to the COVID-19 pandemic and the role that health promotion will play in the economic recovery processes. Researchers have applied several economic principles to foster our understanding of several health problems. Some proposed analytical frameworks have promoted our understanding of the practical applications of economic theories to health and healthcare analyses. This Special Issue will publish current advances in health econometrics with a focus on microeconomic and macroeconomic issues of significant health and development policy relevance. The volume will, among others, cover the global application of some fundamental Health Economics principles with clear focus on health production, demand for healthcare, redistribution, progressivity and equity of health expenditures, healthcare financing and efficiency, economics of preventive medicine/treatments, policy impacts and interventions for health promotion, and telemedicine.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
