Dementia Care in Times of COVID-19

Message from the Guest Editor

The pandemic has and continues to have a great impact on people's lives, particularly the most vulnerable members of our societies. These include people living with dementia and their unpaid carers, who have been affected negatively by the imposed public health restrictions, the sudden lack of face-to-face social care, and care home closures. Slowly coming up to the 2-year mark of the pandemic, I am inviting you to submit your novel research regarding 'Dementia Care in Time of COVID-19'. This can include community- and long-term care settings and can focus on people receiving care and on those providing it (in a paid or unpaid capacity). Studies can be of qualitative or quantitative nature. I am particularly welcoming coproduced research with people living with dementia and unpaid carers. I look forward to reading your submissions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
