Special Issue

New Advances in the Diagnosis and Treatment of Congenital Heart Disease

Message from the Guest Editors

Congenital heart disease is one of the most fascinating topics among cardiovascular diseases. With an incidence of about 1% of live births, congenital heart disease has been a subject of great clinical and scientific interest over the years. More recently, hybrid treatment (surgery and transcatheter) of the most complex heart diseases has shown great promise. This Special Issue will provide updates on the diagnosis and treatment of congenital heart disease through surgical, clinical, interventional, imaging, and translational research innovations.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
