

Special Issue

Work-Related Stressors and Job Demands after the COVID-19 Pandemic

Message from the Guest Editors

Since the outbreak of COVID-19, new ways of organizing work have emerged. The lockdowns and restrictions have pushed organizations towards remote work and new ways of working. These changes have affected all types of organizations, both for-profit and not-for-profit, as well as governmental and private ones. It is therefore time to start a reflection on the lessons to be learned from COVID-19, in order to cope with old and new Work-Related Stressors and Job Demands. This Special Issue of the *International Journal of Environmental Research and Public Health (IJERPH)* focuses on the current state of knowledge on this topic. Most of the changes brought by COVID-19 are bound to stay after the end of the pandemic. It is thus important to address the changes not only within organizations but also among workers, in terms of their attitudes towards work and the perceived quality and productivity of their working experiences. We welcome papers combining a high academic standard and innovative insights aimed at providing practical solutions. The issue will include interdisciplinary studies as well as review papers, position papers and empirical studies.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
