Health Promotion Among People with Psychiatric Disorders

Message from the Guest Editor

The World Health Organization (WHO) states that “there is no health without mental health”. These are likely underestimations, given the major barriers to care such as mental health service access and stigma.

Subsequently, there is growing recognition of the need for multi-stakeholder approaches to promote, scale, and sustain mental health promotion interventions (e.g., early childhood interventions, anti-discrimination programs, and workforce mental health programs), particularly in communities that are disproportionately affected by mental illness and, conversely, have historically experienced an underinvestment in mental health support. Moreover, there is a need to highlight the importance of mental health promotion and intervention in schools as well as in the workplace, particularly in workforce sectors that have a high risk and prevalence of mental health challenges. Papers addressing these topics are invited for this Special Issue, especially those that leverage rigorous, interdisciplinary frameworks and methodologies, the perspectives of those with lived experiences, and those that offer practical applications to policy and practice.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
