Special Issue

The Effects of Extreme Temperature, Pollution, and Climate Change on Human Health

Message from the Guest Editor

I am pleased to participate in this new Special Issue titled "The Effects of Extreme Temperature, Pollution," and Climate Change on Human Health". It is necessary to encourage the scientific community to show scientific evidence of how climate change could affect the health of the population, and we are currently witnessing different changes in climate leading to changes in the transmission pattern of communicable diseases. Further and higher-quality research is needed in this field, and we believe that a good communication of the results is also needed in different areas such as social networks, news and specialized journals. We believe that the publication in this journal is important, but it is important that and increasing number of people understand the result of our research. For this reason, each paper should be written in layman's terms so that decision-makers can easily understand why we have to change or take actions in the community. We hope that this Special Issue will find good research to publish and become a reference tool for public health decisionmakers.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
