

Special Issue

Eating Disorders and Associated Disorders in Adolescents

Message from the Guest Editors

Eating disorders in their full and subclinical manifestations are serious, potentially life-threatening, mental illnesses. The peak onset is during the vulnerable life period of adolescence, and often, they take a severe and protracted course. Previous research has identified multiple interacting risks contributing to the development of eating disorders, including biological, psychological, and sociocultural factors. In view of the severe and long-lasting sequelae of eating disorders and their impact on the quality of life both of sufferers and their relatives, they are a serious public health issue. This Special Issue titled "Eating Disorders and Associated Disorders in Adolescents" in International Journal of Environmental Research and Public Health (IJERPH) seeks original papers, reviews, and meta-analyses dealing with the epidemiology, etiology, prevention, treatment, course, and outcome, as well as the economic burden, of eating disorders and associated disorders in adolescents. We especially encourage the submission of papers dealing with environmental risk factors and public health approaches to prevention targeting the environment.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Editor-in-Chief
