

Special Issue

E-cigarette Use among Youth

Message from the Guest Editor

E-cigarettes are popular among young people, despite being developed and branded as an alternative to combustible cigarettes for adult smokers. As a result, there are ongoing, lively, scientific discussions about the long-term health and behavioral implications of adolescent e-cigarette use. This Special Issue aims to inform these discussions by inviting submissions. Possible topics include:

- Behavioral studies of adolescent e-cigarette use
- Intervention studies related to e-cigarette prevention, cessation, or communications
- Evaluative studies of e-cigarette regulatory policy and/or enforcement.
- Given the use of e-cigarette devices for substances beyond nicotine, this study welcomes submissions related to the above topics, independent of the substance aerosolized by the e-cigarette device

Equitable information is required to generate equitable action. To this end, priority will be assigned to submissions demonstrating equitable representation in study design, sample, and/or implications. This does include identifying economic, geographic, and demographic disparities; however, this also includes studies using participatory methods and participant engagement.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
