Economic Evaluation in Environmental Research and Public Health

Message from the Guest Editors

In the ever-changing times we are living in, with concern over potential health impacts, greater focus is being placed on the role of environmental and public health research to facilitate evidence-based policy decision-making. Economic evaluation has traditionally been applied to decision-making with respect to problems relating to the management of individuals, particularly the optimal choice of clinical management strategies. Increasingly, the need to demonstrate cost effectiveness and return on investment with respect to initiatives focusing on the environment and the health of the population as a whole are being recognized. In this Special Issue, we invite researchers who are active in the conducting of economic evaluations in both environmental research and public health research to submit high-quality empirical and methodological articles. Articles can be in any area of environmental and public health research, but the focus must be on either the methods for, or the conducting of, studies to assess the cost effectiveness of policy, practices, or interventions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
