

Special Issue

The Economic Impact and Cost-Effectiveness of Long-Term Cancer Survivorship (>5 Years)

Message from the Guest Editors

Cancer has long become a global health issue. Medical advances in early detection, treatment, and survivorship care continue to enhance patient outcomes and the probability of survival. Many people with a history of cancer require ongoing medical care due to chronic health conditions and late adverse effects that place a considerable strain on individuals, families, communities, health care providers, and governments. Long-term outcomes of cancer survivors past 5 years since diagnosis are under-researched and the economic impact is uncertain. Health economics research is the ideal platform to measure the long-term economic burden of cancer survivors from the patient, healthcare and societal perspectives, to aid decision-making, optimize care and use scarce health care resources responsibly. For this Special Issue 'Economic Impact and Cost-Effectiveness Evaluations in Long-term Cancer Survivorship (>5yrs)' we would like to invite high-quality health economics research from a range of topics focusing on long-term outcomes beyond the initial diagnosis and treatment for cancer.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
