

## Special Issue

# The Economics of Caring

### Message from the Guest Editors

It is essential to mention that the economics of caring has been an increasing topic of interest in the last two decades. Therefore, it is now an excellent time to provide, in a monograph, a global perspective of the subject, with an overview of the most-affected countries and of the latest methodological advances. In addition, other issues of interest will be addressed, including the following: International perspectives of the economics of caring; Specific studies for illness or particular population segments involved in care, including all kinds of costs (direct costs, e.g., healthcare costs; indirect costs, e.g., productivity losses; and intangible costs); Methods for measuring the effects of care on health and equity, and for evaluating the impact of policies to address the need for care; Impact of caring on the health of the caregivers; Present and future trends of informal care: continuation and survival or extinction? Informal and formal care: complementary or substitutive? We would be delighted to attract as many diverse submissions representing different geographies and jurisdictions as possible.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
