The Economics of Mental Illness

Message from the Guest Editor

Estimates suggest that the annual cost of mental illness to developed countries is around 4% of GDP and results in around 12 million days of reduced productivity each year. To further our understanding of these issues, *International Journal of Environmental Research and Public Health* is calling for papers that explore the economic dimensions of mental illness. Some key questions this work may consider include:

- What is the prevalence of mental illness?
- What is the relationship between mental illness and socio-economic status?
- How are mental health resources allocated? Are these resources appropriate to meet demands?
- What would be the return on investment of a scaled-up response to the burden of mental ill-health?

We hope you agree to help with this project. Kind regards,

Guest Editor

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
