Challenges and Future Trends of Emergency Medicine Healthcare System

Message from the Guest Editor

The COVID-19 pandemic has exposed the fragility of local and hospital emergency medicine healthcare systems. It is necessary to analyze this system and its critical aspects in order to rethink its structure and function. It must be accepted that different types of emergencies may have to be dealt with simultaneously. In this scenario, it will be necessary to design new systems to recognize and treat general acute health situations, as well as those that will become more frequent, such as often-unrecognized geriatric health problems. It will also be vital to establish optimal diagnostic and therapeutic pathways for both acute diseases and rare diseases. Certain categories of fragile patients deserve to have specific attention, for example, HIV patients and patients with mental illnesses and social hardships; these patients must often be urgently treated. All of this will also lead to drastic changes in the methods of teaching healthcare providers, including students, and in the design emergency departments. In these scenarios, reflections on the legal aspects of accessibility to care can serve as interesting starting points.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

School of Society and Culture, Adelaide University, Adelaide 5001,
Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
