

Special Issue

M-Health: Emerging Mobile Health Systems

Message from the Guest Editors

mHealth is integrating many new technologies for intelligent patient monitoring, data collection, and artificial intelligence decision support systems. These services and technologies are applied in many clinical areas, such as chronic care, palliative care, brain health, maternal and childcare, neurorehabilitation, emergency, health behaviour change programmes and patient education.

Despite advances, mHealth still faces challenges related to delivering more person-centred health care, ensuring citizens' secure access to their health data, effective citizen empowerment, early diagnosis and illness prevention. mHealth has become an essential part of public health programme, aiming to empower patients, improve patient-clinician communication, decrease inequality, support vulnerable groups and achieve better health outcomes in a cost-effective manner.

Papers addressing these topics are invited for this Special Issue, especially those combining a high academic and scientific quality coupled with a practical focus on providing emerging mHealth solutions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
