

Special Issue

Social and Emotional Impact of the COVID-19 Pandemic

Message from the Guest Editors

This special issue aims to publish contributions pertaining to psychological consequences of the COVID-19 pandemic. We will be looking for investigations characterizing the impact of COVID-19 related restrictions on human behavior, with a particular focus on social and emotional processes. Topics of interest include: descriptions of social and emotional consequences of the pandemic; impact of the pandemic on addictive behavior, including addiction or gambling; identification of mitigating/aggravating predictors of social and emotional variables. Considering the potential relevance of media and technology in a context where individuals are socially isolated, we also invite submissions addressing (but not limited to) the influence of broadcasting of pandemic-related news on the adoption of protective behavior and mental health variables, the dissemination of fake-news related to COVID-19 and their potential impact on mental health, the use of digital technology (e.g., social-media, online gaming) and their association with mental health variables. Keywords: COVID-19; Emotion; Mental Health; Communication; Addiction; Gambling; Media Psychology

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
