Advances in Endodontic Pain Control

Message from the Guest Editor

Pain, particularly endodontic pain, during a dental procedure is a significant deterrent to dental care. Pain control strategies are continuously being developed, and, accordingly, the range of potential approaches to the management of endodontic pain has increased. The choice of a therapeutic agent or pain control strategy for endodontic pain varies, depending on the source of and reason for pain. Such a strategy may also vary according to the time of the pain experience (occurring preoperatively, during therapy, or postoperatively). In this pain control endeavor, we should not lose sight of an important issue: the tendency to prescribe opioids for endodontic pain and the potential for dependence and opioid-related death as emerging public health problems.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
