

Special Issue

The Recent Development of Environmental Management in Asia

Message from the Guest Editors

Recent years have witnessed a rapidly growing interest in environmental protection and ecology in terms of economic development, which aligns with the trend of the sustainable development goals proposed by the United Nations. Most Asian countries are characterized as developing, and environment management is now the most important issue for the sustainable development in these developing countries. There are research questions that now need to be answered, through both theoretical and empirical analysis—what is the impact of environmental management policies on industrial practices, and how should firms be encouraged to focus more on sustainability? The aim of this Special Issue is to stimulate research and discussion on the recent developments in environmental management in Asia.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
