

Special Issue

Lifecourse Environmental Epidemiology

Message from the Guest Editor

In this Special Issue, we will consider epidemiological approaches and advances in lifecourse epidemiology with regard to understanding influences of the environment upon population health. Specifically, we will focus upon the value of longitudinal studies, including examination of exposure risks at vulnerable periods of the lifecourse, notably those understudied periods such as adolescence and middle age, across a range of populations and policy contexts.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
