

Special Issue

Ethnic Minority Health and Primary Care

Message from the Guest Editors

It is well established that some ethnic minority populations face poorer health and quality of life compared to the general population. The disproportionate burden of the coronavirus pandemic on ethnic minority communities has further highlighted the need to understand and tackle long-standing health inequalities and increase the representation of minorities in health and social care research. Primary care health services and related research plays an important role in understanding and tackling these health inequalities.

In this Special Issue, we are inviting submissions relating to 'Ethnic Minority Health and Primary Care', including work on health and wellbeing outcomes, access to and experiences of primary care services, changes to the delivery of primary care services, primary care policy/strategy, methodological considerations in primary care research, etc.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
