

Special Issue

The Lived Experience of People Living with Dementia and Caregivers

Message from the Guest Editor

We are organising a Special Issue on “The Lived Experiences of People Living with Dementia and Their Caregivers” in the *IJERPH*. Dementia continues to present a major public health challenge worldwide. The condition can lead to difficult health trajectories, and people living with dementia as well as their families often experience economic strain, social exclusion and reduced quality of life. Research into the diverse experiences of dementia is vital to informing compassionate and effective community responses that address the needs of those affected and better enable them to continue living active and meaningful lives. For this Special Issue, we are seeking research that illuminates the experiences and perspectives of people who are living with dementia and of their informal or family caregivers. We are particularly interested in the use of novel techniques to explore lived experiences, such as the arts; examples of how research has translated into policy or best practice; and research considering diversity within communities. However, this Special Issue is open to any subject area related to the title and keywords, and we invite your contributions

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
