

Special Issue

Eye in Diabetes

Message from the Guest Editor

The incidence of diabetes has risen markedly in the past several decades and the complications associated with diabetes are the leading cause of blindness in the working age adults. Impaired corneal innervation and development of retinopathy in diabetes are important indicators of diabetic neuropathy. Early diagnosis of neuropathy is very important for evaluation of risks and therapeutic management and efforts for the preservation of visual function are our main goal. This special issue is intended to focus on describing the most recent findings on impaired corneal innervation and retinal changes in diabetic patients, investigations on mechanisms of neuronal cell death and findings in therapeutical approaches for diabetic kerato- and retinopathy.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
