Special Issue

Interventions to Improve the Care of People Living with Dementia

Message from the Guest Editor

This Special Issue showcase original research, systematic reviews, and case studies that explore innovative, evidence-based approaches to enhancing dementia care across diverse settings. This Special Issue will highlight multidisciplinary strategies including clinical, technological, psychosocial, nonpharmacological, and environmental interventions to improve quality of life, uphold dignity, and provide meaningful support to caregivers and care recipients. Key areas of focus include early diagnosis and care planning, dementia-friendly environments, assistive technologies, non-pharmacological interventions, caregiver education and support, culturally tailored care models, and community-based interventions. We invite contributions from researchers, clinicians, policymakers, and advocates dedicated to transforming dementia care through practical, sustainable, and compassionate approaches. By sharing findings and best practices, this collection will serve to inform future policies, shape clinical standards, and improve outcomes for individuals and families affected by dementia. Submissions emphasizing inclusivity, equity, and innovation in dementia care are especially encouraged.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
