

## Special Issue

# Diabetes Care: Prevention, Diagnosis and Treatment

### Message from the Guest Editor

Diabetes is a chronic disorder and one of the most frequent causes of death all over the world. Long-term diabetes-related complications may involve organs, such as eyes, kidneys, heart, and the central nervous system. Diabetes is not a single disease but a group of different disorders which share chronic hyperglycemia. Diabetes may range from insulin deficiency, due to autoimmune background, to insulin resistance, due to acquired metabolic impairment. An increasing field of research is the genetic background of this disorder. The increasing availability in genetic mechanisms prompted the researchers to describe monogenic form of diabetes, such as neonatal diabetes and MODY.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
