

Special Issue

Frontiers in Workplace Health Management

Message from the Guest Editors

Workplace Health Management (WHM) is a holistic strategy to protect, promote, and manage employees' health at work and thus is similar to the Total Worker Health approach in the USA. With this Special Issue, we aim to highlight and summarize examples of good practice and future implications in the international research of WHM. With regard to examples of good practice, we welcome both manuscripts on integrative approaches and those addressing the four WHM pillars: Occupational Health and Safety, Operational Reintegration Management (Return to Work), Workplace Health Promotion and Personnel Development. We hope for contributions addressing a holistic WHM, as well as those from the one of the four pillars and, at best, with a linkage between the pillars. However, if possible, behavioral as well as environmental preventive aspects should be addressed.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
