

Special Issue

Screening and Recognition of Environmental Organic Pollutants

Message from the Guest Editor

Organic pollutants (OPs) represent plenty of chemicals that could pose threats to the health of both humans and wildlife. To date, the analysis methods, environmental behavior, ecological risk, and environmental health of environmental organic pollutants (EOPs) are hot topics in environmental science research. In particular, to accurately understand the potential risks of EOPs, some effective and efficient methods for screening and recognizing of EOPs are needed. Therefore, this Special Issue of the International Journal of Environmental Research and Public Health (IJERPH) focuses on the current state of screening and recognition of EOPs. New research papers, reviews, viewpoints, case reports, and conference papers are welcome to this issue. Papers dealing with new approaches to derive EOPs standards or risk assessment and management are also welcome. Other manuscript types accepted include methodological papers, position papers, brief reports, and commentaries.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
