Greener Cities and Healthier Lives in the Asia Pacific

Message from the Guest Editors

By 2050, Asia will be home to half the world's urban population. Cities can serve as engines of growth, innovation, poverty amelioration and advances in population health and wellbeing. However, their rapid socioeconomically-uneven expansion outwards and upwards can also perpetuate and redistribute social and health inequities, increase disadvantage and harm the environment in multiple ways. Urban green spaces, which are often threatened by rapid urbanisation, are widely viewed as having a range of health benefits for city dwellers. This Special Issue is concerned with enhancing understandings of the effects, positive and negative, of urban green space on health and wellbeing in Asia-Pacific cities. Theoretical and empirical contributions focussing on any stage of the lifecourse, from birth through to the senior years, are welcome. We encourage a range of paper types including case studies and field experiments through to epidemiological studies and spatial investigations.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
