Digital Innovations for Health Promotion

Message from the Guest Editor

Health promotion and the prevention of disease are global priorities. With the rising prevalence of non-communicable disease and mental health illnesses, there is an urgent need to focus on enabling individuals, families, populations, and communities to adopt lifestyles that promote and improve their health. Digital technologies are becoming increasingly important as a mechanism for the delivery of health promotion interventions in healthcare or community settings. In recent years, there has been a proliferation of innovations and emerging technologies in e-health, m-health, telehealth, gamification, virtual reality, and the Internet of Things. Their application includes, but are not limited to, health education, health monitoring, health communications, psychosocial and behavioural interventions for health promotion, health protection and disease prevention. Of further value is exploring users' engagement with digital interventions, and how health professionals, health educators, or other health champions integrate digital health promotion innovations into their everyday practice.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
