Genetic Biomarkers as a Tool to Improve the Quality of Life

Message from the Guest Editor

Several decades of intensive research have originated multiple factors or biomarkers that are likely to be helpful in the diagnosis, characterization, and therapy selection. A deep understanding of the relative relevance of each biomarker will be key to efficiently diagnose diseases, adverse drug responses and direct our patients towards the drugs more likely to be of benefit based on their particular profile. There is an enormous effort to identify, characterize, and validate meaningful biomarkers because its successful development will represent a step forward in the individualization of diagnosis, therapy or monitoring and improving quality of life.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
