

## Special Issue

# Geographic and Environmental Perspectives on Population Health

### Message from the Guest Editors

Cancer and heart disease are the two most common causes of death in the United States and Canada. Many of these cancers as well as heart disease are preventable through changes to health behaviour, limiting exposure to carcinogens and reducing chronic conditions. These are all important steps to improve one's overall health. Rollbacks in environmental protections in the US create new cause for concern about environmental exposures via human actions. Obtaining a better understanding of how the environment plays a role is pivotal to curb current trends. From an infectious disease standpoint, the environment also can influence how people are exposed and how illnesses are spread. Recent events such as COVID-19 demonstrate the importance of controlling the spread of infectious diseases. The focus of this special issue is to examine how the environment may be related to population health and highlight challenges or potential policy changes needed to create healthier communities. We are inviting all papers that examine any relationship between the environment and population health to submit for consideration in this special issue.

### Guest Editors

Dr. Kristian Larsen

1. CAREX Canada, Faculty of Health Sciences, Simon Fraser University, Vancouver, BC V5A 1S6, Canada
2. Geography & Planning, University of Toronto, Toronto, ON L5L 1C6, Canada

Dr. Richard Sadler

Division of Public Health/Department of Family Medicine, College of Human Medicine, Michigan State University, Flint, MI 48502, USA

### Deadline for manuscript submissions

closed (9 July 2023)

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
