

## Special Issue

# COVID-19 and the Future of Health

### Message from the Guest Editors

COVID-19 has presented unprecedented challenges to society, with global health, economic and social impacts. Here, we aim to assess the long-term impacts of SARS-CoV-2 infection (post-COVID-19 condition), difficulties in the care and management of NCDs, a rise in mental health problems, healthcare workforce burnout, and signs of deepening inequalities, among several other impacts. This Special Issue focuses on the evidence regarding the experiences, impacts and challenges of the pandemic, with an eye toward the future. We intend to draw a multilevel portrait of these issues, considering the experiences of individuals, groups, communities, organizations, health services, and the whole society, encouraging discussion around the lessons we can learn from COVID-19 for the future of public health. Original research papers, reviews, and case reports are welcome. We will accept manuscripts from different scientific fields, including epidemiology, environmental and occupational health, global health, health policy, health economics, health management, and socio-behavioural sciences.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
