

Special Issue

Creating Scientific Evidence for HIV Prevention and Elimination in COVID-19 Era: Best Practices, Policies, and Methodological Approaches

Message from the Guest Editors

To guide HIV/AIDS prevention and treatment programs, and to assess and address issues facing persons living with HIV (PLHIV), this Special Issue aims to generate data-driven and practice-based evidence encompassing the best practices, lessons learned, and efficient strategies on all aspects of prevention and care of PLHIV. The aim is to highlight issues facing PLHIV not simply relating to proper screening and availability of antiretroviral treatment (ART), but also covering concerns about interruptions in treatment and continued testing, such as loss to follow up and poor health outcomes emanating from broader social, economic, and cultural barriers to complete physical and behavioral health, including but not limited to housing, food security, transportation, protection against social stigma, and poor health behaviors. Issues and topics associated with COVID-19 in PLHIV may include: the use of HIV contact tracing infrastructure for HIV/AIDS to support COVID-19 contact tracing; interruptions in HIV care due to the burden of COVID-19 care; and intersecting stigma related to HIV, COVID-19, and mental health.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
