

Special Issue

The Impact of Environmental Regulation on Green Economic Development

Message from the Guest Editor

Due to the scarcity of environmental resources and the negative externality of environmental pollution, there would be inconsistencies between the private and social costs of environmental governance, which may easily lead to "market failure". This, therefore, makes it difficult to solve environmental pollution problems simply by relying on the market mechanism. Implementing environmental regulation is important in achieving green growth. However, the impact of environmental regulation on green economic development has not reached a consensus. Thus, more evidence is needed on explaining the environmental regulation–green economic development nexus, as well as their internal influencing mechanisms. Papers addressing the topic are invited for this Special Issue, especially those combining a high academic standard coupled with a practical focus on accelerating green economic development.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
