

Special Issue

Health Psychology Related to Addiction Behavior

Message from the Guest Editor

In recent years, we have seen a dramatic increase in substance use, including Novel Psychoactive Substances whose effects are still poorly understood. Individuals diagnosed with a substance use disorder present a compulsive pattern of drug use often associated with both physical and psychological dependence. While there is extensive literature on the above topics, this Special Issue will aim to bring together the latest knowledge and advances in this area of drug abuse and the development of psychiatric disorders. A wide range of topics will be included in this issue. This Special Issue in the *International Journal of Environmental Research and Public Health* will focus on recent findings on “Health Psychology related to Addiction Behavior” with the aim to further understand how drug abuse of different types, such as cannabis, alcohol, nicotine, and others, can affect health psychology inducing psychiatric disease, and worsening social interactions and quality of life of young population.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
