

## Special Issue

# Health-Related Emergency Disaster Risk Management (Health-EDRM)

### Message from the Guest Editors

Disaster such as earthquakes, cyclones, floods, heat waves, nuclear accidents, and large scale pollution incidents take lives and incur very large health problems. Health-related emergency disaster risk management (Health-EDRM) refers to the systematic analysis and management of health risks surrounding emergencies and disasters, and plays an important role in reducing the hazards and vulnerability along with extending preparedness, response, and recovery measures. This Special Issue of *IJERPH* invites papers describing/reporting the latest disaster risks and health risk analyses, as well as interventions for health-related disaster risk management. Research outcomes and findings of multi-disciplinary studies are highly encouraged to submit to this Special Issue.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
