

Special Issue

Current Trends in Health and Disease

Message from the Guest Editor

Understanding the current health climate and upcoming healthcare trends can help stakeholders to stay abreast of important changes and be prepared for the future needs of both the population and the healthcare workforce. There is also increased recognition of women's health issues more broadly, with research focusing on improving women's health across the lifespan, particularly during the preconception and reproductive stages.

Today, the disease landscape has shifted from infectious to chronic diseases, and the impact of nutrition, lifestyle, and environmental factors on health has become more important than ever.

This Special Issue seeks research papers on current trends in health and disease, including women's health, the changing health workforce, health system funding models, and novel explorations of disease pathways, including the role of nutrition, metabolism, and inflammation.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
