

## Special Issue

# Health Environment and Sustainable Development

### Message from the Guest Editors

The term sustainability refers to efforts toward improving and maintaining an individual's wellbeing in the long-term by recovering, adjusting, or preserving environmental systems. Sustainability is based in simultaneous benefits regarding economic, social, and environmental factors. Among all the factors that contribute to sustainability, innovational and technological advances have become the most relevant element that can define a population's health. Most of the innovations focused on sustainability imply the institutionalization or routinization of such technologies. This institutionalization implies the integration of different technologies in the healthcare system—from diagnosis to the organization of care.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
