

## Special Issue

# Health and Homelessness

### Message from the Guest Editors

Homelessness is a complex multicausal public health issue transcending geography, populations, and cultures. Homelessness is not solely a problem associated housing but encompasses a myriad of factors over the life course. More evidence is required to understand the impact of homelessness on children, families, and adults to address the international sustainable development goals challenge of reducing health inequalities and poverty and to improve health and wellbeing. The aim of this Special Issue is to attract papers building the evidence base examining the health impacts of homelessness and interventions aimed at improving health and wellbeing. We encourage the submission of a broad range of studies and evidence and will consider the following types of studies: controlled trials, cohort studies, case-control studies, natural experiments, mixed-method evaluations, qualitative studies, policy studies, pilot studies, opinion papers, scoping reviews, and systematic reviews. We look forward to receiving your submissions.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
