Health Impact Assessment

Message from the Guest Editor

Health Impact Assessment (HIA) has been proposed by the World Health Organization (WHO) as a key tool for health in all policies. In the last few decades, the practice of using Health Impact Assessments to influence public policies has been gaining in popularity throughout the world. The WHO defines Health Impact Assessment as a combination of procedures, methods, and tools by which a policy, program, or project may be judged as to its potential effects on the health of a population, and the distribution of those effects within the population. Health Impact Assessment uses qualitative and/or quantitative methods (such as expert consultations, focus groups, comparative risk assessment, and burden of disease), and can be applied to multiple sectors (such as employment, social equity, environment, housing, and transportation).

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
