

Special Issue

Measuring Health Inequities Among Vulnerable Populations

Message from the Guest Editors

This Special Issue calls for studies on the measurement of health inequities among vulnerable populations and developing tools/constructs/indicators that facilitate the study of environmental, global, and public health research targets. It also focuses on best practices, guidelines, strategies, principles, critical analysis, high-quality reviews, and new techniques or technologies that facilitate the assessment or quantification of health inequities in improving population health. For this Special Issue, vulnerable populations include the economically disadvantaged, racial and ethnic minorities, the uninsured, low-income children, women, children and infants in low-income countries, the elderly, the homeless, those with human immunodeficiency virus (HIV), and those with chronic health conditions. This collection of articles that measure or provide systems to assess health inequities will be a boon to the field of public health research aimed at bridging health inequity and improving population health.

Guest Editors

Prof. Dr. Godfred O. Boateng

Prof. Dr. Torsten B. Neilands

Dr. John Saucedo

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
