

Special Issue

Health Promotion for the Elderly

Message from the Guest Editor

This Special Issue in the *International Journal of Environmental Research and Public Health* is devoted to making a substantial contribution to knowledge gaps in the understanding of preferences, measures, and cost-effective strategies and policies addressed exclusively at elderly populations. Because certain lifestyle issues are more important among this segment of population, such as loneliness, social isolation, limited functional capability, disease management and self-care, and the fact that promoting health across the health continuum of the older adults can be promoted by various means, ranging from education, behavior modification and environmental design to legislative involvement, a wide range of topics will be included in this issue. We welcome manuscripts related but not limited to the following issues:

- dealing with low participation in health promotion for homebound older adults, unmet needs of minorities or immigrants;
- proven health promotion strategies considering the continuum of health, age, gender, cohort, living arrangement, or family structure of the elderly;
- tests new approaches incorporating personal health coaching.

Guest Editor

Prof. Dr. Ching-Ju Chiu

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
