

Special Issue

Health Risks and Health Promotion among Unemployed People

Message from the Guest Editor

The COVID-19 pandemic is a global health crisis, and it unleashed economic and jobs crises in many countries. This Special Issue aims to analyze the relationship between mass unemployment and health, from the perspective of public health. Firstly, this Special Issue intends to recruit articles pertaining to the differences in health status, morbidity and premature mortality between unemployed and employed people, arising from their social conditions. An additional topic of interest could concern the relationship between unemployment and suicide. Secondly, unemployment impairs health. We look forward to receiving intervention studies on health promotion, prevention measures, counselling, stress reduction, training or group services among unemployed people. Thirdly, the relationship between unemployment and health behaviour could be examined. Of particular interest are articles that focus on socially vulnerable groups, e.g., unemployed individuals with disabilities, migrants, single parents. There will be a focus on empirical studies and theoretical articles. International reviews and meta-analyses or policy analyses will also be considered.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
