

Special Issue

Health, Housing and Homelessness

Message from the Guest Editors

The housing situation and the increase in the number of homeless people is a worrying reality around the world. The WHO is warning about the impact of housing policies on the health of the people. In the same way, the 2018 report of the FEANTSA (European Federation of National Organisations Working with the Homeless) described an increase in the number of homeless people in the European Union, with a possible direct impact on the health of this population under exclusion. Unfortunately, more information is necessary to understand the impact of housing situations in the health of the populations. The Special Issue "Health, housing and homelessness" invites authors from disciplines such as social policies, psychology, public health, medicine, economics, psychology, demography, and sociology to submit their original and review articles related to analysing the impact on health of homelessness situation and housing policies. Papers from European Union and all other countries are welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
