

Topical Collection

A Focus on Healthcare from the Perspective of Gender, Culture, Management, and the Economy

Message from the Collection Editors

The objective that we propose in this Special Edition is to bring together the latest research framed in the culture of care, its evolution in societies, care economics, and care management, highlighting the gender perspective. Likewise, we propose to do this through the adoption of transdisciplinary approaches that prioritize in these studies relational analysis in the context of health scenarios, ideologies, and people. Therefore, studies are justified in relation to health and illness, the culture of care, and the profile (sex/gender) of the care provider. This Special Issue seeks studies with different quantitative and qualitative methodologies, as well as studies of mixed methods. Reviews following quality criteria will also be considered. We particularly welcome research projects that adopt a multisectoral and transdisciplinary approach.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
